About Malcolm Thompson Pumps

From humble beginnings in 1967, Malcolm Thompson Pumps has grown to be one of Australia's leading pump companies. While our operation may have grown, our focus remains the same, to provide our clients with proficient and professional service and be their trusted partner for all their pump related needs.

We work across all prominent Australian industries, including mining, utilities, industrial, agriculture, manufacturing, construction and municipal waste, providing unique solutions to match our clients exact specifications.

We deliver a quality range of pumps, support our clients with service and repair facilities and offer complete pump package solutions through our specialist projects and engineering service.

We even have our own manufacturing facility where we design, test and manufacture the legendary Stalker Pumps brand.

Being one of the last remaining pump suppliers in Australia with an on-site foundry gives us complete control of the end to end manufacturing process. Not only does this result in a premium quality product, but allows us the flexibility to manufacture to exact requirements.

Nossiter Pumps

Nossiter

Sydney based Nossiter Pump Services was proudly acquired by Malcolm Thompson Pumps in 2007. The well-known and trusted Nossiter Pumps brand plays a vital role in the operations of many buildings built over the past 50 years and which are still in operation today. MTP has extensive records of these systems and specialise in completing routine maintenance programs, system upgrades and urgent repair works to Nossiter systems still to this day.

Our Partners

In addition to the range below, Malcolm Thompson Pumps can also source further pump brands upon request.

Products and Services

- Circulator, end-suction and centrifugal pumps
- Pressure booster pumps (potable and non-potable water)
- Submersible pumps (sewage and stormwater)
- Dosing systems and pumps
- UV filtration systems
- Technical advice for new systems and upgrades
- Pit cleaning and confined space entry
- Pump hire

Facilities Management

Malcolm Thompson Pumps has been servicing the commercial property sector for over 50 years, providing support and service as well as new products and system extensions. We have extensive experience working within aged care, education, health, hospitality, manufacturing, corporate premises and leisure, covering essential services such as stormwater, sewerage, chillers and condensers, hydrant systems, booster systems and commercial dosing systems. MTP not only supplies the Australian market with the well-known and respected Nossiter and Stalker Pumps brands but also has access to all prominent pump manufacturers and can supply and install pumps to meet the needs of most commercial buildings, including pumps for chillers, boilers, stormwater/sewerage systems, potable water, rainwater, hot water recirculation and pumps for emergency mechanical services.

Service and Repair

While new system installations and system extensions are a part of the MTP business, it is our ongoing service, repair and preventative maintenance competence that forms the basis of many of our relationships with facility managers.

Malcolm Thompson Pumps is committed to supporting our commercial customers, offering a 24/7 emergency repair service to keep essential services running regardless of the time or the day. Our service technicians carry essential spare parts and are able to diagnose and repair most issues on site. Occasionally, if in the best interest of safety, the pump will be removed until a suitable repair or replacement can be carried out.

Our tailored preventative maintenance programs aim to limit the risk of a site being shut down for unplanned repairs. Our programs take into account your specific site requirements, such as the fluid being pumped, the type of application, the equipment age, the system design and the consequence of a catastrophic failure. Although preventative maintenance is not a 100% guarantee, it does provide additional peace of mind, knowing your system is being monitored by a qualified technician.

Certifications

How we can help

- 24/7 emergency repair and scheduled maintenance service
- Onsite laser alignment
- Professional advice from experts in their field
- Skills and machinery to test, repair and rebuild a wide range of pump types
- Dedicated projects and engineering department
- Design and installation of complete pump systems
- Access to all major manufacturers of pumping equipment
